

Flow, awareness, and landscape fit - v2

Updated 2026-05-27 after competitor comparison ship · tradefundrr-main-site.vercel.app

1. Site flow at a glance

Four tiers. Traffic enters at the top, gets oriented on the homepage, deep-dives on a product page, and converts at the bottom. The 2026-05-27 ship added the competitor comparison section to four pages (index, stocks, options, why-us), with a hero-area cross-link CTA on the first three.

TradeFundrr marketing site — flow + awareness map

Where traffic enters, where it routes, what awareness level each page is built for. Updated 2026-05-27.

Diagram reflects state of the site as of 2026-05-27 after commit afdd8a5. Awareness terminology follows Eugene Schwartz's five tiers.

2. What shipped on 2026-05-27

The honest comparison the prior analysis flagged as missing is now live. The table compares TradeFundrr against Topstep, Apex, Earn2Trade, FTMO, and Maverick Trading across ten dimensions: broker-dealer partner, asset classes, path to live capital, pricing model, entry cost range, profit split, payout cadence, eval mechanic, fee rebate, and US regulation footprint.

PAGE	COMPARISON SECTION	HERO CTA	STATUS
index.html	Live - between Plans and FAQ	Live - below hero ticks	Shipped
pages/stocks.html	Live - between T3 trust and Reviews	Live - below worstcase line	Shipped
pages/options.html	Live - between T3 trust and Reviews	Live - below worstcase line	Shipped
pages/why-us.html	Live - between 6 Reasons and Payout Proof	n/a (this is the comparison page)	Shipped
pages/pricing.html (futures)	Not yet - page still on old system	Not yet	Pending (gap #7)
Crypto page	Not yet - page still on old system	Not yet	Pending (gap #7)
pages/about.html	Not yet - About rebuild pending	Not yet	Pending (gap #6)

Section anchor on every page: #compare - firms. Hero CTA reads: *Compare us to Topstep, Apex, FTMO and others* →

Monthly audit scheduled. A scheduled agent runs on the 1st of every month at 7am local, web-searches each competitor for changes against the live HTML, and writes a change-flag report to Agent Reports/. The agent does not edit production; Jason reviews and applies edits manually. First run: June 1, 2026.

3. Audience awareness - who the pages are pitched at

Unchanged from v1. The site remains built for a hybrid audience, not a single awareness tier.

- **Primary target: mid-aware (problem to solution aware).** The avatar section, the math reframes (20% on \$25K vs \$100K; \$0.50 winner on 2 vs 20 contracts), and the Growth-vs-Express comparison all assume the reader is a retail trader hitting a ceiling.
- **Secondary target: low-aware (unaware to problem aware).** The orientation panel, the "Where the payouts actually come from" econ section, the glossary, and the 3-step explainer are for cold Meta-ad arrivals.
- **Newly addressed: most-aware (FTMO vs Apex vs you).** Before 2026-05-27 the site relied on implicit competitor positioning. Today's ship adds an explicit head-to-head table that the most-aware shopper can use as their entire research moment without leaving the site.

4. Landscape fit - what changed

4.1 What we now have that we did not

- **Explicit competitor comparison.** Previously a critique. Now lives on four pages and one canonical URL (why-us.html). Closes the largest most-aware gap.
- **Audited differentiator framing.** The v1 analysis claimed live-capital path as the moat. After verification it is clear Topstep, Apex, Earn2Trade, and Maverick all have live paths of some kind. The real moat is the SCALE of T3 Global's path (\$1M to \$20M+ buying power, vs \$150K to \$400K elsewhere) plus the regulated broker-dealer partner. The shipped section reflects the corrected framing.
- **Self-correcting data layer.** The monthly audit task means competitor cells do not silently rot. If Topstep changes Live Funded Account terms, the June 1 audit will flag it.

4.2 What is still missing

- **Futures page (pricing.html) rebuild.** Largest TAM in the prop firm category is futures. The current futures page still uses the old visual system and does not carry the competitor comparison or rebate framing. This is the highest-leverage remaining piece of work.
- **Crypto page rebuild.** Smaller TAM but still meaningful category coverage. Same template as futures once that lands.
- **About page rebuild.** Natural home for a longer Christian + T3 partnership narrative. The comparison section already addresses what About would have carried, so this is lower priority now than it was on 2026-05-26.
- **Proof artifacts.** The trust ticker still uses abstractions ('Growing Community' instead of 'X traders funded / \$Y paid last 30 days'). Live Trustpilot widget and total-paid-out counter are still on the to-do list. The handoff doc flagged this on 2026-05-25; today's ship did not address it.

5. Recommended next priority

Order has not changed since v1, but the futures rebuild is even more important now that the comparison section makes the absence of futures coverage in the new system more visible.

- **1. Rebuild pages/pricing.html (futures)** using the 22-section template from stocks and options. Embed the competitor comparison section. Drops the hero CTA pattern in too. This is one large session of work.
- **2. Rebuild the crypto page.** Same template. Smaller scope.
- **3. Harden the proof layer.** Replace trust ticker abstractions with real numbers. Add a live Trustpilot widget. If payout data supports it, publish a monthly paid-out total. Each of these is small individually but compounds.
- **4. About page rebuild.** Lower urgency than before today. The comparison section now carries part of what About would have done.
