

Flow, audience awareness, and landscape fit

Prepared 2026-05-27 · tradefundrr-main-site.vercel.app

1. Site flow at a glance

The site is structured as a four-tier funnel. Each row below is one tier; the cells are the pages or blocks that live at that tier and the audience awareness level each is built for. Cells in the warm cream color are not yet rebuilt in the new visual system.

TRAFFIC SOURCES	COLD PAID	WARM SEARCH	BRAND / REFERRAL	EDUCATION ARM
	Meta / YouTube ads Mixed awareness	"Best prop firm" Solution-aware	Direct + Trustpilot Most-aware	Path to Prop One-way link in
TIER 1 · HOMEPAGE Unaware → Solution	SHIPPED index.html Orientation + offer + trust	KEY BLOCK Christian + T3 partnership FINRA/SIPC attribution	KEY BLOCK First-Payout Rebate Non-guarantee legal framing	KEY BLOCK "What is funded trading?" Low-aware orientation panel
TIER 2 · PRODUCT PAGES Problem → Product	SHIPPED pages/stocks.html Acct-size constraint, 22 sections	SHIPPED pages/options.html Contract-count constraint, DXTrade	PENDING (gap #7) pages/pricing.html (futures) Old system; \$179 rebate plan	PENDING (gap #7) Crypto page Old system; not yet rebuilt
TIER 3 · CONVERSION Most-aware	PRIMARY CTA Plans buttons Growth / Express signup	ALT PATH pro-funding.html \$100K+ capital contribution	TRUST Trustpilot + glossary In-page sections	EXTERNAL Funding Dashboard dashboard.tradefundrr.com login

Awareness terminology follows the Eugene Schwartz framework: unaware → problem-aware → solution-aware → product-aware → most-aware.

2. What the flow is trying to accomplish

The site is built as a funnel with three nested asks, not a brochure. Each tier does one specific job:

Tier 1 · Homepage — Orientation + trust

The "What is funded trading?" panel, the Christian / T3 partnership block, and the First-Payout Rebate section all exist to convert a cold reader into someone who believes the offer is real before they ever see a price.

Tier 2 · Product pages — Qualification

Stocks and options pages take a self-identified day trader and walk them through a 22-section deep dive that ends in a Growth / Express / Pro Trader plan choice. Each page reframes the prospect's specific binding constraint — account size for stocks, contract count for options.

Tier 3 • Plans CTAs → Funding Dashboard — Conversion

The Growth / Express buttons are the primary money line. Pro Trader Funding sits off to the side as a high-ticket alternate path for traders who arrive with capital. The Funding Dashboard login is the actual hand-off to the product.

Two pages — futures (pricing.html) and crypto — still point to the old visual system, and the About page rebuild is still open. That is a real gap because futures is historically the largest prop-firm category by traffic.

3. Audience awareness — who the pages are pitched at

Both design docs call the awareness model out explicitly, and they are consistent. The site is built for a hybrid audience, not a single awareness tier.

- **Primary target: mid-aware (problem → solution aware).** The avatar section, the math reframes (20% on \$25K vs \$100K; \$0.50 winner on 2 vs 20 contracts), and the Growth-vs-Express comparison all assume the reader already knows they are a retail trader hitting a ceiling. They do not necessarily know prop firms are the answer yet.
- **Secondary target: low-aware (unaware → problem aware).** The orientation panel, the "Where the payouts actually come from" econ section, the glossary, and the 3-step explainer are all bolted on for visitors who arrived cold from a Meta ad.
- **Not really targeted: most-aware (FTMO vs Apex vs you, show me the rules).** A solution-aware prop firm shopper has to scroll past a lot of empathy and orientation before hitting numbers. The plans cards are there, but they are not the first thing.

This is a deliberate choice. It is the right call for paid traffic where awareness is mixed. It is a riskier call for organic search where intent is much higher.

4. Is this the correct approach given the prop firm landscape?

Mostly yes, with two real concerns. Net read first, then detail.

Net: the approach is correct, the trust and legal posture are stronger than 90% of the category, but the proof layer (real numbers, competitor comparison, live Trustpilot) is thin, and futures being unrebuilt is the single most important gap to close before any About rebuild.

4.1 What the site is getting right

- **T3 Trading Group / T3 Global is the strongest differentiator in the category.** Most of the prop firm landscape is unregulated foreign sim shops — FTMO, the now-collapsed MyForexFunds, Apex, Topstep. Leading with a FINRA/SIPC-member broker-dealer partnership is the best trust play available, and the homepage finally puts that front-and-center after the 2026-05-26 Nadav fix.
- **The legal posture on the rebate** (rebate, not guarantee; explicit non-guarantee language) is exactly what MyForexFunds did not have when the CFTC came for them. This is a meaningful moat.
- **The "worst case: you lose the eval fee, never your savings" reframe** directly attacks the #1 objection a low-aware trader has about prop firms.
- **Splitting Growth (eval, \$399) and Express (direct funded, \$899, rebated)** matches how the rest of the category prices and gives the reader a real choice instead of a single price wall.

4.2 Where the site is exposed

- **Light on the proof artifacts most-aware shoppers actually screen for.** The category has converged on three social-proof signals: a total-paid-out counter, a live Trustpilot widget, and an active Discord. The trust ticker still uses abstractions ("Growing Community" instead of "X traders funded / \$Y paid last 30 days"). The 2026-05-26 handoff already flagged this. Apex Trader Funding publishes monthly payout totals; that is table stakes now.
- **No competitor comparison anywhere on the site.** Implicit comparison (retail broker vs us) is everywhere, but no FTMO / Apex / Topstep table. Most-aware shoppers will run that comparison externally, and you do not get to frame it. A TradeFundrr-vs-prop-firms comparison table on the About page (when it is rebuilt) is worth more than another empathy section.
- **Stocks-led positioning is unusual for the category.** Most prop firms lead with futures or forex because the TAM is larger and the communities are more vocal. The T3 story is strongest on stocks so this is defensible, but it means the futures page rebuild is not a backlog item, it is a critical missing front door. Futures-searching traffic is the bulk of category demand and right now it lands on an old-system page.
- **One-way Path-to-Prop linking** (Nadav gap #2) is the right call and is already queued. Affiliate hygiene matters here — TradeFundrr should not link out to the education arm.

5. Recommended next priority

Given the above, the highest-leverage next move is:

- **Rebuild the futures page first** using the same 22-section template as stocks and options. This closes the largest traffic gap and keeps the messaging system consistent.

- **About page second** — it finally lets the Christian + T3 partnership story breathe on its own URL and is the natural home for the missing competitor comparison table.
- **Crypto page third** — smaller TAM than futures but still a category that gets searched. Same template.
- **In parallel, harden the proof layer:** replace the trust ticker abstractions with real numbers, add a live Trustpilot widget, and consider publishing a monthly payout total if the numbers support it.
