

V2 Message Map

What the page is trying to do

A breakdown of the persuasion architecture behind **tradefundrr-v2.html** — the narrative arc, the job of each phase, and the recurring promises that hold it together. Read this before we touch the design.

- DIRECT-RESPONSE
- 27 SECTIONS
- 7 NARRATIVE MOVES
- 1 TARGET READER

Prepared for **Jason** · TradeFundrr · May 30, 2026
Source: **tradefundrr-v2.html** (223 KB) · Compared against live **/pages/stocks**

The one-line thesis: the live page is an institutional explainer; V2 is a long-form direct-response sales letter. Same facts, completely different intent. The live page educates and lets you decide. V2 runs an emotional sales sequence engineered to move one specific person — a retail equity trader with a working strategy and a small account — from "I'm skeptical" to "I'll buy Express today."

V2 is built in seven moves. Each one has a job. Every section below serves one of these jobs — nothing in the page is decorative.

1 Promise + instant proof

SECTION: HERO

Job: Lead with the outcome, not the argument. "You can trade. You just need the buying power." The faux live DXTrade dashboard (+\$1,847 today, payout ready Day 5) shows the result before any case is made. The trust ticker underneath (\$2.3M paid, 4.2★ Trustpilot, 80/20, weekly payouts) buys instant credibility so the reader keeps scrolling.

2 Three escalating "taxes" — the agitation engine

SECTIONS: TRUTH → CAPITAL-GAP → TIME-TAX → RISK-MATH

Job: This is the spine of the page. V2 names three reasons the reader is stuck, each more emotional than the last, until the problem feels structural and unsolvable on their own:

- **Capital tax (capital-gap):** a \$5K account needs 100%+ returns to matter — "damn near impossible." It's not a skill gap, it's a **capital gap**.
- **Time tax (time-tax):** even with a real edge, a small account takes years to compound — most quit before it gets good. TradeFundrr gives back **time**.
- **Emotional / risk tax (risk-math) — the peak:** trading your own money risks "your kid's braces, the down payment, your fuck-you money." Fear makes you trade *worse*. This is the most aggressive section on the page, by design.

Stacking all three makes the solution feel *inevitable* rather than optional.

3 The reframe — stop trading yours, trade ours

SECTIONS: EQUITY-TRADERS → HOW-IT-WORKS → RISK-REVERSAL

Job: The pivot. "Until now, equity traders had no option" names the category and positions TradeFundrr as the path that didn't exist. Then the mechanism in plain English: eval → funded → keep 80% → **fee refunded, net cost \$0**. Risk-reversal turns the refund into the emotional fulcrum — "we only win when you win," a partnership, not a purchase.

4 The offer

SECTIONS: WHY-US → PROGRAMS → BIG5 → FAQ → REBATE → REFUND

Job: Present and de-risk the buy. Mission first, then the three programs, then a decision aid (Growth vs Express — the Big 5 differences), then objection-handling FAQ (including a head-on "Is this a scam?"), then the rebate terms, and finally the single strongest reframe on the page: **"It's not a fee. It's a security deposit."**

5 Reassurance + radical transparency

SECTIONS: [STILL-NOT-SURE](#) → [STEPS](#) → [RULES](#) → [BUSINESS-MODEL](#)

Job: Disarm the two deepest fears. "What if I fail?" → you retake it, your savings stay safe. Then it over-delivers on transparency: full per-plan rules with nothing hidden, and an honest "here's literally where the payout money comes from." The transparency is itself a tactic — it pre-empts the scam objection by refusing to hide the business model.

6 Credibility + differentiation

SECTIONS: [TWO-PATHS](#) → [T3-GLOBAL](#) → [COMPARISON](#) → [PLATFORMS](#) → [REVIEWS](#) → [WHO-THIS-IS-FOR](#) → [WHAT-SEPARATES](#)

Job: Build the proof stack. T3 Global's SEC / FINRA / SIPC credentials are the anchor ("Sim is sim. Live is live. We don't mislabel"). Real Trustpilot reviews supply social proof. "Trading your own money vs ours" crystallizes the decision in 10 rows. Then takeaway-selling ("this is NOT for you if...") raises desire and qualifies the buyer, and a founder quote humanizes the firm.

7 Urgency + close

SECTIONS: [WHY-NOW](#) → [FINAL-CTA](#) → [FOOTER](#)

Job: Create movement now. "The market doesn't care if you're ready." Then a clean 4-step next-action close (click → get set up → trade → get paid) and a fence-sitter CTA for anyone still hesitating.

THE RECURRING DRUMBEAT (REPEATED LIKE A SALES-LETTER CHORUS)

\$100K buying power · \$0 of your money · fee refunded when you pass · keep 80% · weekly payouts · savings stay safe

Live page vs V2 — intent at a glance

Live page (/pages/stocks)	V2 (tradefundrr-v2.html)
Institutional explainer	Direct-response sales letter
Educates, then lets you decide	Agitates, reframes, then closes
Measured, neutral tone	Emotional, escalating tone
Facts presented evenly	Facts sequenced to build pressure
Reader is an audience	Reader is one specific buyer

Two flags to carry into the design + compliance work

We're saving compliance language for later, but both of these live in the *message* itself, so they should shape how we rebuild:

1. The core emotional promise is the exact thing compliance flagged

V2's entire sales logic leans on "risk nothing but a refundable fee — your savings stay safe, \$0 net." When we soften that language we'll be touching the load-bearing wall of the argument. Plan the reframe deliberately rather than just deleting words, or the page loses its spine.

2. V2 regressed on the numbers

V2 uses **\$1,499 Express, "fully refunded."** The locked build sheet and the current live page say **\$899 with \$800 of \$899 rebated, not guaranteed.** V2's message is built on a price/refund claim the current source of truth contradicts. Worth reconciling before we propagate it through the rebuild.

Next step: section-by-section design comparison (live site vs V2), then we apply the V2 visual system and handle compliance language.
